DETAILED ACTION

1. Prosecution is REOPENED upon recommendation of an Appeal Conference held October 25, 2007 based upon arguments presented in the Substitute Appeal Brief filed July 21, 2007 regarding the use of Bennet as prior art (see Substitute Brief page 11) instead of the provisional application 60/190,825 filed upon March 21, 2000. Rejections are submitted below using the '825 provisional application in response to arguments presented in the Substitute Brief.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lebda et al (US 6,385,594) in view of provisional Application 60/190,825 (hereinafter '825).

The claims in reference to Lebda have been all previously addressed in the office action mailed February 07, 2005.

Lebda fails to disclose,

The request to apply is for a plurality of products, and specific information is required to be submitted to apply for each one of the products;

each page is assembled over the network from documents contains at least one field corresponding to the specific information required to apply for one of the products.

Art Unit: 3694

The fields displayed by a plurality of documents are specific information required to be submitted to apply for each one of a plurality of products.

The applicant has asserted that '825 does not support the above teaching, particularly that '825 does not support the teaching of credit analysis that differs as a function of the item for which the loan is sought (see Substitute Brief, page 12). The examiner disagrees the applicant's narrow interpretation of the provisional invention. It is submitted that the AutoAfford platform precisely teaches credit analysis that differs as a function of the item for which the loan is sought because it provides "real-time, multi (emphasis added) or single lender loan qualification." (see page 1, second paragraph). It is submitted that credit analysis is used as part of the screening process and provides the buyer with multiple lender choices. It is well known in the art, whether buying different types of cars or houses, that multiple lenders structure comparable (but different) loans based upon the consumers credit report. It is also submitted in relation to AutoAfford that the processing of pre-selected vehicles can represent a range of different type of vehicles or items associated with a vehicle. For example, there may be a difference between loan structure based upon a fully loaded vehicle and one that is not, or a Lexus and a Ford mustang.

Thus it would have been obvious for one of ordinary skill in the art at the time of the applicant's invention was made to combine the teachings of Lebda relating to presenting and accepting a credit application over a network to including the teachings of '825 because for the potentially different types of credit wherein affordability would be a factor for structuring various types of credit.
